Re: Emergency action in Juneau & Wood Counties, Wi.

This letter is in regard to the 938 pp. report issued as a result of the 41 borings and 5 private well water tests in northern Juneau and southern Wood County(s), Wis.. called "EPA SAMPLING INSPECTION REPORT APR. 30th-MAY 3rd, 2018"

We find the Armenia Growers Coalition MOU to Juneau & Wood County totally inadequate in addressing short, mid, and long-term solutions to this dangerous area problem.

Please look again at your up-gradient and down-gradient data as it regards the source of the pollution and well contamination. Also please reference the counties' well testing data included.

It has been more than 5 weeks since the AGC offer and residents don't have clean drinking water, or, worse yet, many residents remain unaware. Their health is at risk.

Therefore, we request the EPA use it's authority under the Safe Drinking Water Act of 1974, Emergency Section 1431, to act immediately. "Eminent health and substantial endangerment . . ." are the necessary reason for invoking 1431 now.

Please acknowledge this communication.
